

370

Control Panel

The Gardtec 370 control panel has taken the issue of security to a new level and become a leader in its field. The latest production techniques and systems have produced a control panel of the highest reliability to surpass you and your home's requirements.

A refreshing new outlook in the actual physical design of the keypads has made this an attractive accessory instead of a necessary eyesore.

370 Control Panel

Gardtec 370 Features

- 7 fully programmable independent zones + 1 dedicated global tamper enables flexibility to protect the environment in most domestic and small commercial premises

Protect your property with technology

Gone are the days when having a security system installed necessitated having a large obtrusive control panel fitted.

The Gardtec 370 control panel is a blank end station that incorporates all the electronics necessary to run your security system but now all you see is one of three neat and attractive keypads for system operation.

Application

The 7 fully programmable zones + 1 dedicated global tamper ensure that the Gardtec 370 control panel has a feature base that surpasses the requirements of most domestic or small commercial installations. The advanced functionality means that the unit can be programmed to meet individual environment requirements yet in a form that allows for simple operation. A metal cased version is also available where the installation dictates higher security.

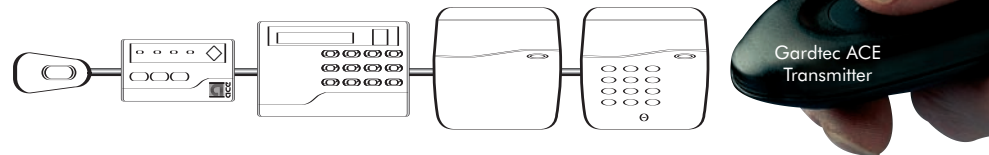

Aesthetics

The three different keypad options allow for keypad location anywhere, the perfect example of the security system blending in with its surroundings.

Ace Options

Gardtec ACE (Advanced Control Equipment) is compatible with all of the Gardtec control panel range. This allows for the simplest form of security system operation - the press of a button. This is achieved through an attractive keyfob and secure infra red transmission.

ACE utilises the highest form of security and with up to 14 keyfobs per system it's ideal for commercial and domestic premises.
