

## RISCO Group's E-News November Edition

Hello and welcome. In this November issue we have the launch of our Twin Beam Infrared detectors, we introduce another member of our regional sales team, and our Technical Team have some important news for you.

Don't forget, if you have any news you'd like to be issued in our E-News please let me know, as your success is our success and we are happy to share any good news that we hear.

### Twin Beam Detectors

RISCO Group is pleased to announce the launch of twin beam detectors. RISCO's twin beam infrared photoelectric detectors are designed for a wide variety of residential and commercial outdoor applications, providing reliable and cost effective perimeter protection of buildings, fences, warehouses, factories, car parks, gardens and many other applications. For more information please [click here](#).

Codes:

RBM7115 15m IR Twin Beam  
RMB7225 25m IR Twin Beam  
RMB7250 50m IR Twin Beam  
RBM7275 75m IR Twin Beam  
RMB71P 71 Pole Bracket  
RMB72P 72 Pole Bracket

### RISCOBus website

Last month we told you about our RISCOBus mini website, have you been able to look at it yet? The site gives the reasons for choosing RISCO Bus detectors and you can use the RISCOBus Calculator to work out how much time you would save and monetary value of these savings. There is also a 2 minute movie which explains all of this and shows diagrams of how easy it is. For the RISCOBus website [click here](#).

RISCO Bus is designed to save your business time and money.

Its simplified Bus Wiring architecture dramatically reduces cabling length, labour costs, physical zone expanders and on-site maintenance.

By boosting your cash flow and increasing your profit margin – RISCO Bus allows you to carry on business, better than usual.

## **Technical update**

### **Nova GA External Sounders**

As part of the EN50131-4 standard's requirements of the new warning devices, monitoring of the trigger wire is a mandatory requirement for Grade 3 installations. The RISCO Group Nova GA sounder range has been upgraded to make provision for Bell trigger wire monitoring. Also, following feedback from you, it was found that with certain configurations of control equipment it was necessary to fit a 'zener diode' to the trigger wire. The vast majority of modern control equipment use negative bell trigger signalling and therefore, all future Nova GA sounders will be supplied as negative trigger only. For a more detailed explanation on the Nova GA sounders Technical Bulletin please [click here](#).

### **Windows 7**

With the recent release of Windows 7, our Technical department have now tested RISCO's software and our tests prove that RISCO appear to be functional with Windows 7 Ultimate 32Bit. This applies to software for the following: - ProSYS & WisDom upload/download, Gardtec Remote upload/download, Agility configuration software & AGM software.

### **NSI Regional Meeting Midlands**

The National Security Inspectorate (NSI) held their regional meeting at the Greswolde Arms Hotel, Knowle, B93 0LL on Thursday 26th November. Organised by Trevor Carey of Eclipse Alarms Ltd, who is the chairman of the Midlands NSI, the sponsorship was offered to RISCO Group and we were more than happy to sponsor the day and gave a presentation on RISCO Group products and how these can benefit your success.

*Thank you.*
